## 1. INTRODUCTION TO SARAO

### About SARAO

The South African Radio Astronomy Observatory (SARAO, formerly in part SKA SA) is the business unit of the National Research Foundation (NRF) that houses and operates South Africa's national radio telescope shared facilities, including the MeerKAT, KAT-7, and Hartbeeshoek 26-m radio telescopes.

As a member of the international effort to build the Square Kilometre Array (SKA), which will be the world's largest radio telescope, South Africa (through the NRF's business units) is responsible for the construction and operation of the MeerKAT precursor telescope, for hosting the SKA Mid Frequency telescope, and for implementation of the African VLBI Network.

The SARAO project office has offices based in Johannesburg and Cape Town, as well as the radio-quiet SKA host site in the Karoo, 90km from Carnarvon in the Northern Cape, which hosts the Square Kilometre Array mid-frequency telescopes, MeerKAT, and KAT-7 radio telescope installations, as well as a number of guest instruments, including the HERA telescope.

### About SANSA

The South African National Space Agency (SANSA) came into being in December 2010. SANSA was created to promote the use of space and strengthen cooperation in space-related activities while fostering research in space science, advancing scientific engineering through developing human capital, and supporting industrial development in space technologies. A significant part of SANSA's work involves monitoring the Earth and our surrounding environment, and using the collected data to ensure that navigation, communication technology and weather forecasting services function as intended. SANSA's Head Office is in Pretoria, and they oversee SANSA operations and management of the Earth Observation programme.

## 2. BACKGROUND

SARAO and SANSA are in a collaboration to develop and realize the Digital Earth South Africa (DESA) solution. DESA is an Earth Observation Data Cube (EODC): a digital platform through which users can interact with Earth Observation (EO) data and a solution to store, organize, manage and analyze EO data. It is based on the Open Data Cube, an Open Source EODC solution. The main objective of the DESA is to facilitate EO data usage by addressing complex space data challenges and providing access to large spatio-temporal data in an analysis ready format.

The DESA solution should allow users to:

- Catalogue large amounts of Earth Observation data. SANSA has a repository of data from multiple EO instruments for this purpose.
- Provide users with a high-performance querying interface and data access.
- Give scientists and other users the ability to perform Exploratory Data Analysis.
- Allow scalable processing of the stored data.
- Track the provenance of all the contained data to allow for quality control and updates.

Key technical deliverables of the DESA development project consist of acquiring and deploying:

- The computer hardware for the solution. This includes the computing, network, storage and their respective supporting infrastructure.
- The platform software that serves the hardware to the application layer.
- The actual DESA EODC software in its optimal functional configuration.
- The EO data and its respective pipelines to serve the DESA EODC.
- Services required for the productivity of the solution, such as security, DevOps, and High Availability.
- An integrated end solution that abstracts the underlying technology and processes from the user.
- The solution should be supported and maintained.
- Technical skills transfer should occur between the developers and the SANSA team for sustainable operation of the DESA post-deployment.

The project's allocated resources, scope, timelines and other contractual details will be finalised, agreed upon and shared with the winning bidder.

### 3. SPECIFICATION / SCOPE OF WORKS

The DESA projects translate customer needs into new products, services, and profits thus changing the structure and function of the Earth Observation (EO) unit. A business analyst is required to assist SANSA's adaptability, agility, and ability to manage constant change through innovation introduced by the system. The incumbent will analyze the business domain, document its processes and systems, outline business requirements, and match a software business model with the product being built (in this case DESA). The incumbent will also capture business and market-level requirements and then interact with developers through a project manager.

#### Clarifying a business idea.

- Distill the business case.
- Extrapolate systems, functional and performance requirements and their respective verification criteria, for the project and any subsequent sub-projects.
- Set up primary product benchmarks, such as customer acquisition strategy and value proposition, and help decide on basic product KPIs.
- Produce and collate relevant systems documentation.

- Guide the systems verification and acceptance processes.
- Evaluate the most relevant means of implementation, which will be the most convenient for both stakeholders and developers.

**Planning system acquisition activities.**

- Develop the organization’s system lifecycle plan for the DESA solution from development to maintenance.
- Oversee the system level integration and phase graduations of the DESA solution.
- Set and control the acceptance criteria for the system.
